**MEMORANDUM FOR:** Assistant to the Deputy to the DCI  
for National Intelligence  
Programs Evaluation

**SUBJECT:** MC&G Study

25X1A

**REFERENCE:** [ ] and  
Attachment

1. We have reviewed the subject study and concur in the conclusions and recommendations contained therein. Following are two relatively minor comments which you may wish to consider prior to finalizing the report.

25X1A

2. Paragraph 7d (Civilian) on page 30 refers to requirements in the [ ] Project. Our interpretation of these requirements is that they did not identify precision MC&G as very necessary, but were mostly oriented toward questions of resolution and spectral or color capability.

25X1A

Hence, the importance of [ ] applications and their influence on MC&G missions of high precision would appear to be limited.

3. We think some consideration should be given to the effect of feedback from high-accuracy MC&G results on photography. For example, given a negative with identified ground ties, it may be possible to adjust scale and distortion more simply and rapidly than can be done at present.
